

Test Pens

available from 22 to 60 mN/m

Test Pens for testing the surface tension and to determine the cleanliness of surfaces.
Test Pens can make statements on the adhesive strength of printing inks, coatings and adhesives on all surfaces such as plastic, metal and glass as well as on the degree of cleanliness in mN/m (dyne/cm).
This Test Pens were developed to get "non-poisonous" Test Inks .
PINK coloured Test Inks are special testing liquids in ranges of defined surface tension.

Test Pens

- from 22 to 60 mN/m
- accuracy +/- 1,0 mN/m
- observation time 22 to 26 mN/m is 2 sec.
- observation time 28 to 44 mN/m is 4 sec.
- observation time 45 to 60 mN/m is 2 sec.
- simple handling
- no spilling
- pen sets available in sets of 4, 6 and 8 pcs.
or as single pens, 5 mL
